OBJECTIVE

Map your key decisions and set, for each one, the **level of autonomy** you delegate to the agent. This is the bridge between the sovereignty diagnostic (ACF-00) and the criticality analysis (ACF-02).

1 THE AGENTIC MATURITY SCALE

Before mapping, establish a shared vocabulary. First, position the maturity targeted for your agent — most organizations aim for level 2. Delegated autonomy is then set decision by decision (section 3).

<p>0</p> <p>Classical automation</p> <p>Fixed rules, no autonomy of judgment. A script, not an agent.</p>	<p>1</p> <p>Assisted agents</p> <p>The agent proposes, the human systematically decides. Decision support.</p>	<p>2</p> <p>Governed agents</p> <p>The agent acts within a defined framework, under active supervision.</p> <p>TARGET FOR ~80% OF CASES</p>	<p>3</p> <p>Supervised autonomy</p> <p>The agent decides alone; the human checks after the fact and keeps the kill switch.</p>
---	--	---	--

2 YOUR KEY DECISIONS

Identify the **three decisions** you plan to entrust — fully or in part — to an agent. Describe them before assessing their criticality.

<p>A DECISION A</p> <p>TITLE</p> <p>MAIN STAKE</p> <p>EXPECTED IMPACT</p> <p>KEY DEADLINE</p>	<p>B DECISION B</p> <p>TITLE</p> <p>MAIN STAKE</p> <p>EXPECTED IMPACT</p> <p>KEY DEADLINE</p>	<p>C DECISION C</p> <p>TITLE</p> <p>MAIN STAKE</p> <p>EXPECTED IMPACT</p> <p>KEY DEADLINE</p>

DETAILED MAPPING

For each decision, record its criticality (calculated in **ACF-02**), the delegated autonomy level (suggestive · co-decision · supervised autonomous · autonomous) and the safeguards that make this level acceptable.

DECISION	CRITICALITY (ACF-02)	DELEGATED AUTONOMY	SAFEGUARDS & CONDITIONS	OWNER
A				
B				
C

☑

THREE ACTIONS TO LAUNCH

#	ACTION TO LAUNCH	RELATED DECISION	DEADLINE
1			
2			
3			

Next step: assess the criticality of each decision with **ACF-02 — Criticality Matrix**, then set the rules of each agent in **ACF-03 — Agentic Constitution**. A well-mapped decision is a decision already half-governed.
